

## NOVEL EMERGING SUBSTANCES

Axis Forensic Toxicology leads the industry in designer drug testing

### AXIS' NOVEL EMERGING SUBSTANCES PANEL GIVES VISIBILITY TO THE PRESENCE OF THESE COMPOUNDS IN YOUR AREA

#### Why a Novel Emerging Substances Panel?

- Novel substances can disappear as quickly as they appear, placing challenges on laboratories to develop detection methods quickly.
- These compounds are frequently found mixed with other, routinely identified compounds such as fentanyl or methamphetamine.
- In the current focus on public health, many jurisdictions want to be sure they are identifying the full scope of impactful compounds.
- There is insufficient data to determine the impact of a given concentration.
- This panel is designed to be focused on detection and rapidly updated.
- Results are reported qualitatively from our high-resolution screening method using a second aliquot of the specimen.

#### Current Analytes

AP-237	Flunitazene
Brorphine	Fluorofentanyl
Butonitazene	Isonitazene
Etonitazene	Metonitazene

Screening for novel emerging compounds is now included with Analyte Assurance™, a feature of Axis' Comprehensive Panels.
